Agile Role Conflicts and Confusions

27-05-2016

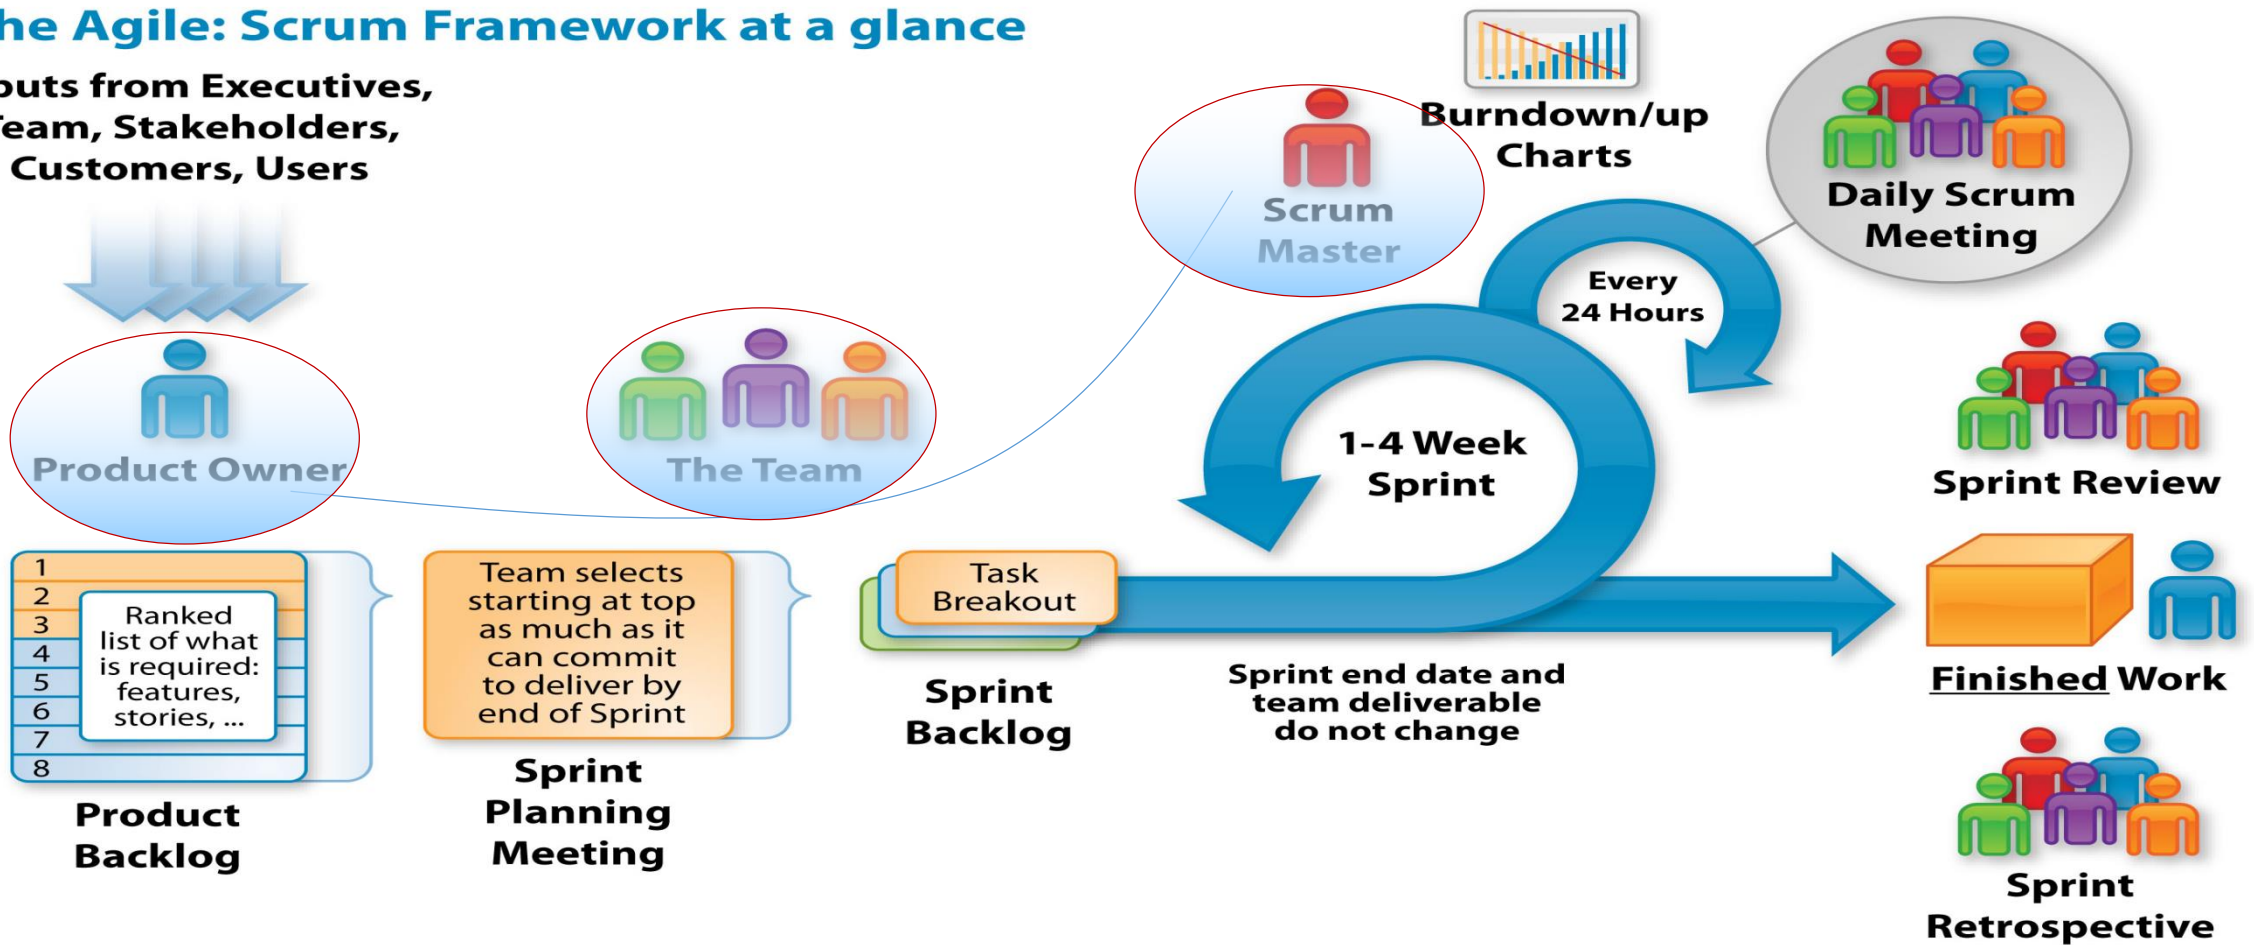

- Agile Scrum Framework and Roles
- Scaled Agile Framework and Roles
- Practical Framework and Roles
- Impact of Practical Framework
- Recommendation/Suggestion

Agile Scrum Framework

Agile Scrum Framework and Roles

The Agile: Scrum Framework at a glance

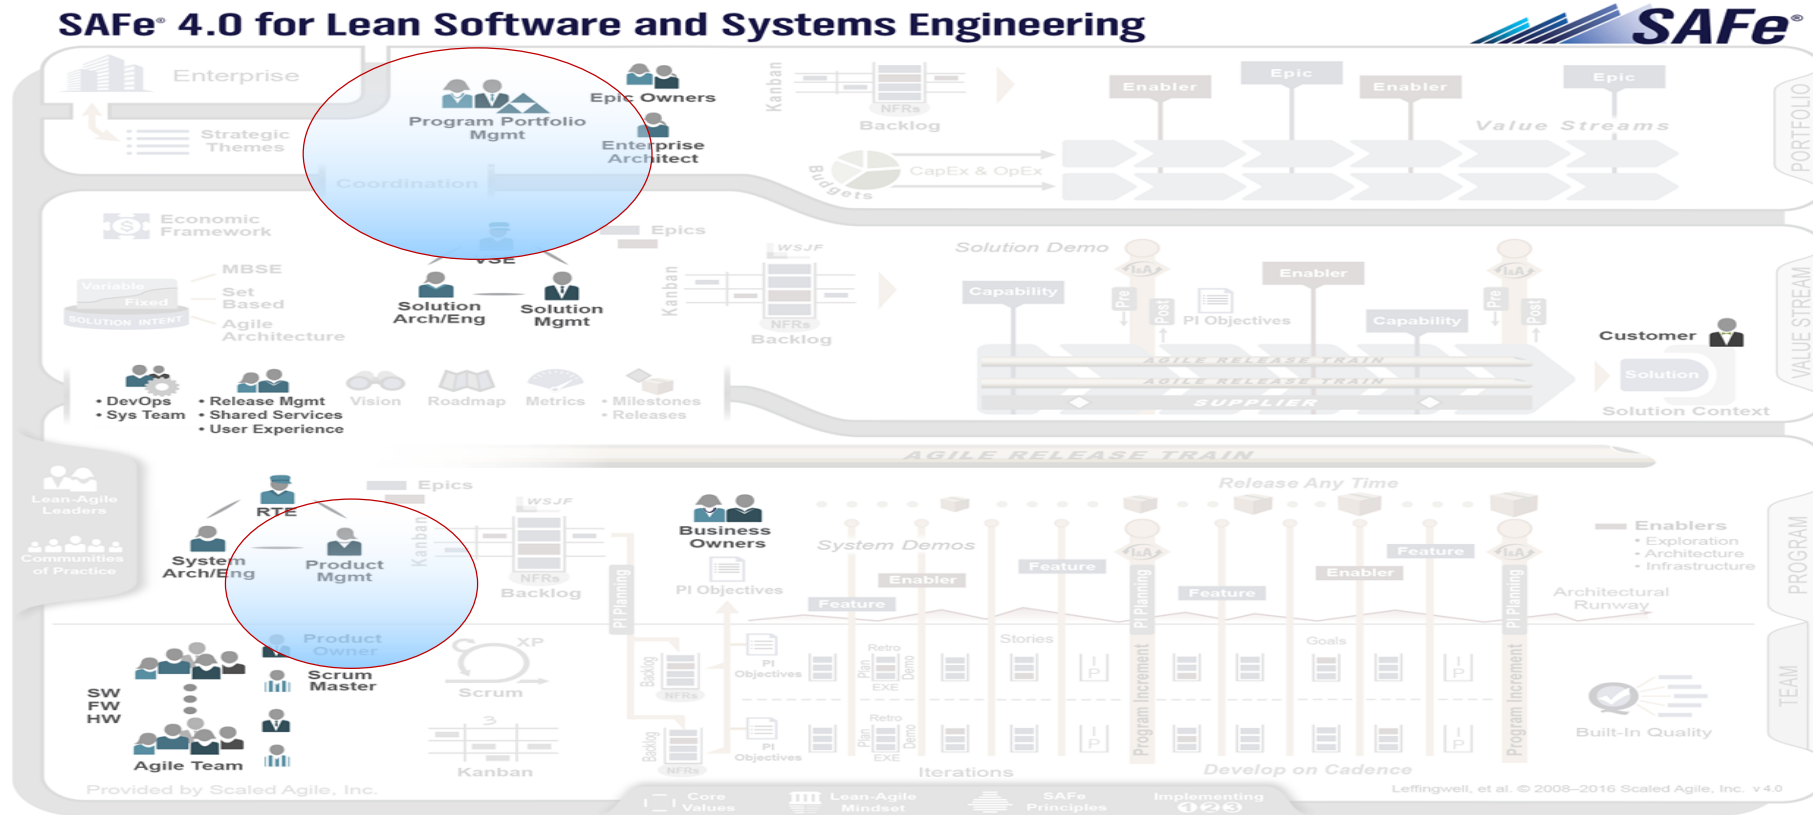

Inputs from Executives,
Team, Stakeholders,
Customers, Users

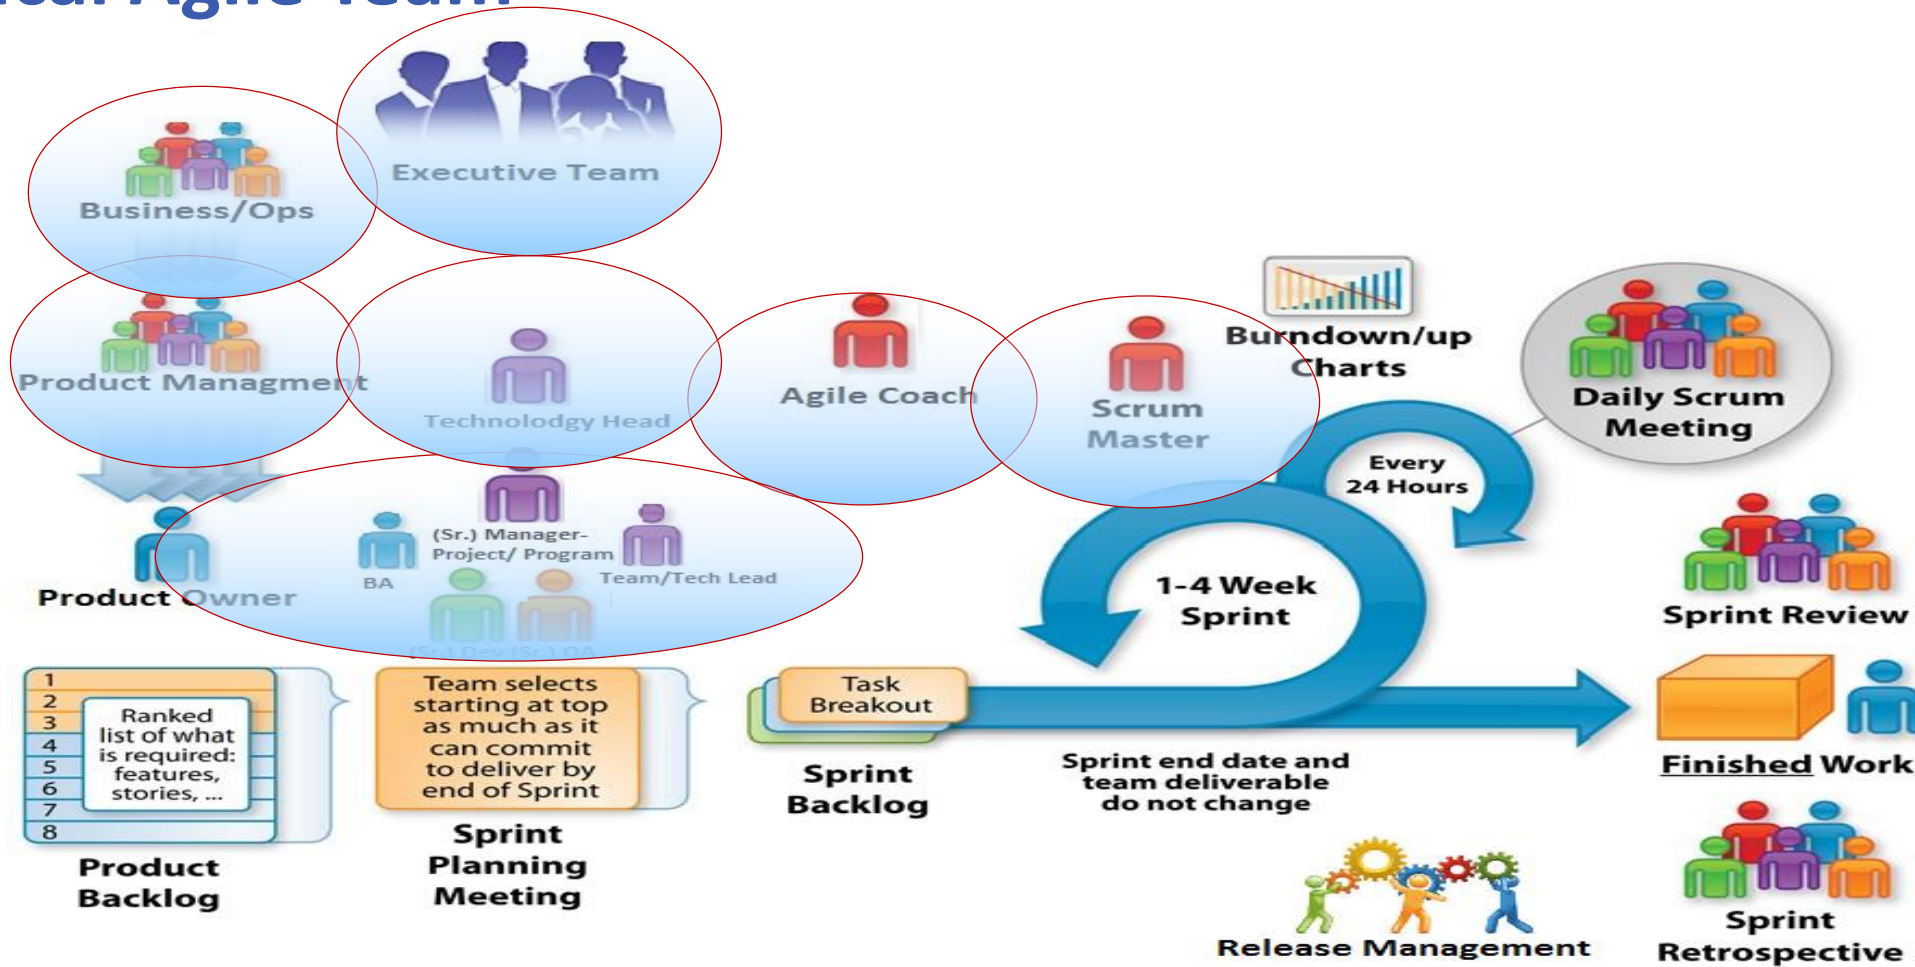

3 Major Key Roles: Product Owner, Scrum Master and Development Team
No Explicit Project Manager/Management Role

Scaled Agile Framework

Scaled Agile Framework and Roles

2 Major Roles Introduced : Program and Portfolio Management
Which means Product Manager under Product Management
Manager under Program/Portfolio Managements

Practical Scrum Team Composition: Manager, Team /Tech Lead, BA , Product Owner, Scrum Master, QA and Dev
+ Other Influential Roles: Agile Coach , Product Management , Business , technology head and Executive Team

Lack of ownership, accountability and role clarity

- Individuals putting no efforts, **make others** frustrate /**demotivate**

- Create **environment of blame** and finger pointing

- Individuals **make excuses** to avoid **responsibility**, makes other responsible

Result: Role Conflicts and Confusions

Goal Setting /Expectation Management

Organization Culture

Coaching

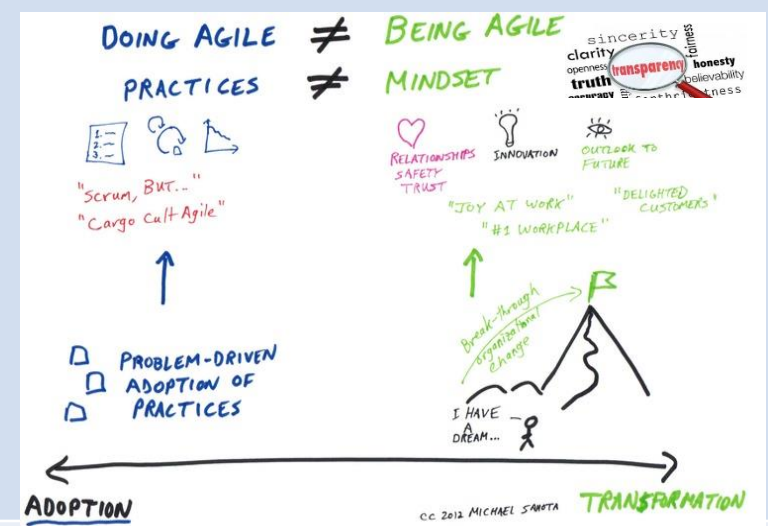

S Specific. The goal identifies a specific action or event that will take place.

M Measurable. The goal allows you to determine and measure your progress towards completion.

A Achievable. The goal should be achievable given available resources.

R Relevant/Realistic. The goal allows for likely success based on available skills and time.

T Time-bound. The goal should state the specific time period in which it will be accomplished.

Remove Conflicts
 (Helps Reduce Overlapping , Ambiguity and Set Clear Expectation)

Change in Mindset
 (Use of Agile Language , Supportive Env, Agile Matrices, Career Growth, Encourage New Collaborative Practices , Empower and Engage, Bring Transparency in Roles)

Clear Confusion
 (Helps Remove Role Interpretation and bring clarity such as Scrum Master is not a manager , Manager becomes Agile Manager)

Conclusion: Every role is important in an organization as far they **are clear**, adds value to organization, given **empowerment**, distinct with minimum role overlapping and ambiguity, and has crystal clear expectation and role clarity.

Thanks

Scrum Master: ???

- They are People Manager /Project Manager because they are people coach
- Top management does not understand Agile as they keep asking metrics reports from team.
- Manager /Leads does not support SM's

"Team leads/Managers are not supporting us in terms of empowering teams, talking to team, allowing SM to do people involvements, people engagement and let's allow team to do whatever they want to do. Management does not understand agile, current mindset is not agile mindset. My role is misunderstood, I don't have power to play role and people are not respecting my role"

Team Lead: ???

- They are People Manager because of reporting structure, engagement/motivation part of key role
- Scrum Master does not add any value except just arranging call on the name of facilitation
- Why Manager ask metrics /report /PPT from us

"We are not clear what value Scrum Master is adding other than just arranging meetings / phone calls. They are not removing impediments, not involved with PO's, not taking a stand to talk to team about problems when there is a process breach, hiding team's misses and mistakes, meeting with teams directly without leaders and they are not involved in story level estimations"

Scrum Team :???

- They are self organized/self sustained
- They don't need any manager

Agile Coach: ???

- Success and failure belong to team
- They are the people coach

Scrum Guide: ???

- Project failure or success accountability belongs to product owners, teams and scrum master and nothing mentioned about manager.

Top Management/HR: ???

- Manager is culprit in case of attrition / project failure /success
- What people are doing ? What is productivity? Where is metrics ?

Result : Role Conflicts and Confusions
